

Rapid

Simply works.

A genius.
One name.

KIPOS

Gardening, landscaping

and

Rapid

What gardening and landscaping, Rapid and art have in common

Gardeners and landscapers make a valuable contribution to our landscape. Their creativity and wealth of ideas enable us to live in inspiring and beautiful environments.

Soils are worked on, earth is moved and moulded into new shapes. Plants and shrubs, green spaces, paths, borders, wood, stone, grass ... horticulturalists and landscape architects are masters of their trade, and their work is as varied as the styles of art.

And what the right brush is to an artist, the ideal machine is to a gardener.

And it has a name:

KIPOS
Master of its trade

Imagination
Passion *Courage*
Creativity Power
Determination
Reliability Economic efficiency
Flexibility

...every day anew

KIPOS

κήπος

Greek for garden

Rapid KIPOS Simple. Ingenious.

The Rapid KIPOS is the ideal tool for professional soil cultivation. Wherever precision, flexibility and power-saving work is required: this single-axle walk-behind tractor makes horticultural work easier and more efficient than ever before.

Advantages

Simple and intuitive operation – even for less experienced users. Perfect balance and optimum traction for easy working. Low space requirement for storage and transport. An all-round machine that can be used in all areas of gardening and landscaping without compromise.

Why Rapid KIPOS?

The Rapid KIPOS is more than just a work unit – it is a reliable tool for demanding tasks in gardening and landscaping. With its combination of functionality and ease of use, it sets new standards in soil cultivation. Tillage, mulching, mowing, cleaning, transport or winter maintenance – the Rapid KIPOS masters every task with ease and defines the standard in efficiency, reliability and ease of handling.

Quick-change artist.
Performance artist.
Economic efficiency artist.

KIPOS

The Rapid KIPOS is narrower than a wheelbarrow

Narrow track, perfect balance

The Rapid KIPOS offers an impressive and extremely narrow track width. Perfect balance and manoeuvrability make it a specialist for rotary tilling, even in the tightest of spaces.

Easy to transport

The Rapid KIPOS can be easily transported in vans thanks to its foldable handlebar. Small transport dimensions and easy to secure during transport thanks to the eyelets provided. Securing the Rapid KIPOS is even easier with the optional lashing flange. This makes it possible to drive directly to the customer's front door.

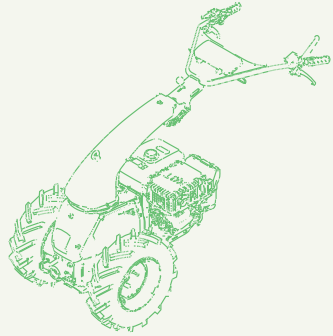

Ergonomic working

The handlebar, which can be rotated and swivelled without tools, can be locked in three positions on both sides and can also be height-adjusted in eleven positions during travel using a knob, so that work can be carried out ergonomically.

Maximum flexibility

The attachments can be changed in no time at all without tools

Simple and efficient

The Rapid KIPOS offers an impressive stepless drive with cruise control function as well as its ergonomic and intuitive operation. The travel speeds are finely adjustable and optimised for tillage applications. The swivelling and rotating handlebar also ensures maximum flexibility at work.

Multifunctional

The attachments can be changed without tools, making the Rapid KIPOS a multifunctional helper throughout all four seasons. Operating costs can be reduced thanks to the versatile use of the basic machine. A wide range of Rapid attachments is compatible with the Rapid KIPOS – from levelling harrows, sweeper brushes and road sweepers to cutter bars, snowploughs and snow throwers.

Attachments

ROTARY HARROW

The Uni-Rotary Harrow effectively crushes clods of earth, loosens the soil, enriches it with oxygen and leaves it level. Thanks to the high number of rotary tines, a fine soil condition is achieved in just one pass – the ideal basis for the successful cultivation of plants, vegetables or lawns. The working depth is determined by the mesh roller, which can be easily and continuously adjusted using a hand spindle.

*Tilling
the soil* *Fertilising*

RAPID ROTARY TILLER

Enables easy handling thanks to optimum guiding and intake behaviour. It can be used for a wide range of applications: from basic soil cultivation to seed and plant beds to the incorporation of organic material and fertilisers.

Loosening *Levelling*
Spreading

Attachments

Levelling

Incorporating substrate

RAPID LEVELLING HARROW

Optimum distribution and levelling of plots – efficient and precise. After the basic soil cultivation, the levelling harrow ensures that the soil is evenly levelled. Ideal for mechanised spreading of substrate, humus and more. The result: a plot that is ready for sowing or planting.

Tilling the soil

RAPID STONE BURIER

Enables easy handling thanks to optimum guiding and intake behaviour. It can be used for a wide range of applications: from basic soil cultivation to seed and plant beds to the incorporation of organic material and fertilisers. The patented «Rapid Quick Lift» ensures unrivalled fatigue-free, comfortable working.

Attachments

Mowing

RAPID CUTTER BARS

For precise mowing on any terrain and in sensitive areas. Thanks to various options such as the Rapid clamp sole, the cutting height can be optimally adjusted. Depending on the setting, this makes an important contribution to maintaining biodiversity – by protecting soil fauna, preserving refuge areas for plants and animals and promoting regrowth and seed formation.

Mulching

RAPID FLAIL MOWER

Efficient and clean – ideal for tall grass, undergrowth and crop residues. With its high cutting performance, the Rapid KIPOS masters even tough vegetation with ease.

The infinitely variable height adjustment and the narrow drive box also enable precise working, even close to obstacles. Perfect for green spaces and challenging terrain.

A hand holding a black pencil is drawing a site plan on a miniature model of a campus. The model features various buildings, green spaces, and pathways. The hand is positioned on the left side of the frame, with the pencil tip touching the drawing. The background is a blurred view of the actual campus, showing trees and buildings.

Opinions on the Rapid KIPOS

We asked our customers what they like about Rapid KIPOS, how they work with it, and if there is anything we could do better. A small selection of the answers we received.

**Lorenz Arbogast, Head of Training Centre
Jardin Suisse, Neuenkirch (Switzerland)**

«The Rapid KIPOS delivers impressive performance, and we greatly appreciate the quick attachment changes and its intuitive operation without releasing the handlebar. This makes daily work simple, safe and efficient, especially when it is used by different operators.»

**Marcus Matthes
Lutz Matthes, municipal, garden and clearing work,
Mittenwalde/Berlin (Germany)**

«We use the Rapid Kipos with stone burier, tall grass mower and road sweeper as a machine for hire and a demonstrator. Thanks to its simple, intuitive operation, the machine does not require much instruction and customers quickly get to grips with it. This saves us a lot of time, and the small dimensions of the machine make it easy to transport. The perfect versatile companion for gardening and landscaping!»

**Cyrill Lampart,
Lampart Gartenbau & Unterhalt GmbH, Zofingen (Switzerland)**

«The Rapid Kipos makes a lot of gardening work easier for us. Thanks to its short wheel-base and stability, we can also work precisely in very narrow gardens. The compact design ensures an optimum overview, and the ergonomic handlebar can be perfectly adapted to our needs in next to no time. The engine power of the Kipos is simply unrivalled. The machine also offers ideal lashing points for safe transport. Particularly practical: we can continue to use the attachments from our Rapid Mondo without any modifications. I found the name Kipos for a horticultural machine to be a creative and apt name, as Kipos means 'garden' in Greek.»

**Xavier Mertens
Machine rental, Bever (Belgium)**

«I really like renting out the Rapid Kipos, as it is extremely easy for all users to operate it thanks to the hydrostatic drive. My customers are generally professional users who also really appreciate the ergonomic operation of the Kipos.»
