

Rapid

Optimised drying of cut material on slopes

«As a child I would have dreamed of such an implement, we had to do this job by hand.» Adi I.

«At first I thought the implement made no sense, but after using it I was positively surprised by the handling and work results» Mike A.

«I don't have to turn the cut material completely over, ruffling up the normally deposited crop is all that's required.» David W. from M.

Rapid Worber

Rapid

The new Rapid Worber – efficiency between mowing and twisting.

With the Worber, Rapid has closed the gap in mechanised green forage harvesting on steep slopes.

The innovative attachment accelerates the drying process – powerfully, evenly and reliably. Laborious manual labour with pitchforks or blowers? History. The Worber brings real, mechanised power to the slope – for optimum forage quality.

The combination machine comprising a single-axle walk-behind tractor and the Worber attached without tools works conveniently and safely in forward travel. The accelerated drying effect is clearly noticeable.

Rapid Worber – efficiency at a glance

→ **Faster & more even drying**

Innovative plastic tines lift, loosen and mix the forage.

→ **Suitable for slopes & gentle on the ground**

Lightweight construction and low centre of gravity for safe working even on steep slopes.

→ **Clean & safe**

Rear protective cover minimises dust, particles, clippings and other debris in the operator's working area.

→ **Raking when reversing**

Prepares the edge area for subsequent work steps, e.g. clearing with the Twister.
